SUMMARY

Software Engineer with 4+ years of experience designing and delivering production mobile applications across government, education, and e-commerce domains.

Focused on building practical AI-powered applications and growing toward AI Engineering, with hands-on experience integrating local LLMs, developing on-device AI features, and designing end-to-end AI workflows that connect models with real-world applications.

TECHNICAL SKILLS

Languages

Dart • TypeScript • Go • Python • Kotlin
• SQL • C/C++

Mobile Development

Flutter • React Native • Clean Architecture • Mobile Architecture
• Offline-first Systems • Performance Optimization • Native Integration (Swift/Kotlin)

Web & Backend

Next.js • SvelteKit • Vue 3Go • (Echo, GORM) • REST API Design • WebSocket
• Server-Sent Events (SSE)

Data & Infrastructure

SQLite (Drift) • PostgreSQL • SQL Server
• Firebase Firestore • Docker
• GitHub Actions • CI/CD

EDUCATION

B.Sc. in Software Engineering
Burapha University | 2017–2021

PERSONAL PROJECTS

Langridge — Offline AI Voice Interpreter

Tech: Flutter, Dart FFI, llama.cpp, SQLite, On-device LLM

- Developed an offline voice translation app running speech recognition, LLM inference, and speech synthesis entirely on-device.
- Integrated llama.cpp through dart:ffi with Flutter isolates for efficient local AI execution and responsive performance.

C-DOCS — Encrypted Local-first Markdown Workspace

Tech: TypeScript, SQLite WASM, OPFS, Web Workers, AES-GCM

- Designed a local-first document workspace using SQLite WASM and OPFS with the browser filesystem as the source of truth.
- Implemented AES-GCM encryption with device-generated keys for secure offline document storage.

WORK EXPERIENCE

Mobile Developer / Full Stack Developer

Zenith Comp Co., Ltd.

Bangkok, Thailand | 2025 – Present

- Architected and built the Government Meeting System, an offline-first Flutter iPad application with a two-way synchronization engine, enabling government meetings to operate offline while automatically reconciling data after connectivity restoration.
- Designed the mobile security architecture, implementing AES-256-GCM encryption, secure key management, certificate pinning, jailbreak detection, and native Swift integrations for encrypted PDF generation and dynamic watermarking.
- Extended the supporting Go backend by implementing device synchronization, authentication flows, real-time communication, and system integrations to support the Government Meeting System ecosystem.
- Designed and implemented the SWU AI Platform administration system across frontend, backend, and database layers, delivering RBAC, dynamic permission management, user administration, and API key lifecycle workflows.
- Owned technical delivery across multiple client projects, from requirement discovery and solution design to on-site presentations, troubleshooting, UAT support, and production rollout.

Mobile Team Lead / Developer

LearnCloud Co., Ltd.

Bangkok, Thailand | 2023 – 2025

- Led mobile development of aiLearn, an AI-powered exam preparation platform, delivering core exam and personalized learning experiences.
- Built real-time AI learning features using SSE and WebSocket, including AI-generated explanations, performance analysis, and progress visualization.
- Established the Flutter architecture from the ground up using Clean Architecture principles, enabling scalable feature development and maintainable code.
- Owned mobile platform capabilities including authentication, subscriptions, CI/CD workflows, and App Store / Google Play releases.
- Led mobile engineering execution by translating product requirements into technical solutions and collaborating with backend, AI, product, and design teams.

Mobile Developer

MyOrder Marketing Co., Ltd.

Chon Buri, Thailand | 2023

- Built MyPinmall, a Flutter/Riverpod group-buying marketplace, implementing commerce workflows including tiered pricing, campaigns, group progress tracking, and social sharing.
- Developed end-to-end shopping experiences with product catalog, cart, order tracking, and payment workflows supporting QR payments, bank transfers, and cash on delivery.
- Delivered production features across Flutter and React Native applications, collaborating with product, design, and backend teams from API design through App Store and Google Play releases.

Mobile Developer

Minerta Technology Co., Ltd.

Bangkok, Thailand | 2021 – 2023

- Developed a real-time drone tracking platform with live GPS visualization, enabling operators to monitor aircraft locations during flight.
- Built cross-platform mobile applications using Flutter and React Native across multiple products, delivering features and production releases for iOS and Android.
- Developed responsive web features with Nuxt and collaborated with senior engineers on architecture, debugging, code reviews, and maintainable software practices.
