EDUCATION :

Bachelor of Science in Software Engineering
Burapha University
Thailand | 2017–2021

TECHNICAL SKILLS :

Programming
Flutter • Dart • Next.js • TypeScript • Go • Python • Kotlin •
SQL • SQLite • PostgreSQL • SQL Server • Firebase • Docker

I approach design from the user's perspective, striving to simplify complex processes and create intuitive, accessible experiences. I view "it works" as a starting point rather than the final standard, continuously refining solutions to improve usability, reliability, maintainability, and overall quality. I value diverse perspectives and forward-thinking approaches, recognizing that thoughtful design and a deep understanding of user needs are essential to developing products that are both effective and meaningful.

WORK EXPERIENCE :

Mobile Developer / Full Stack Developer
Zenith Comp Co., Ltd

Bangkok, Thailand | 09/2025 – 08/2026

- Architected and delivered an offline-first Flutter iPad application for a government meeting system deployed across 50 devices, with two-way synchronization, real-time WebSocket communication, and automatic data reconciliation after connectivity restoration.
- Designed the application's security architecture, including AES-256-GCM encryption, secure key management, device integrity checks, encrypted PDF generation, dynamic watermarking, and fail-closed access controls.
- Improved system reliability and engineering quality through content-hash change detection, automated foreground/background cleanup, mock-data tooling, GitHub Actions CI, iOS integration testing, coverage thresholds for critical modules, and 11 Architecture Decision Records.
- Designed and built the SWU AI Platform administration system across database, backend, and frontend layers, including LDAP integration, normalized RBAC architecture, scalable API design, and user management.

Mobile Team Lead / Developer
LearnCloud Co., Ltd.

Bangkok, Thailand | 01/2024 – 08/2025

- Built aiLearn's core Flutter application from the ground up, delivering complex exam and adaptive-learning workflows, real-time AI explanations, performance visualization, and In-App Purchase.
- Led a 3-person junior mobile team while remaining primarily hands-on, planning development, breaking down requirements, assigning work, guiding implementation, and handling debugging and multi-environment deployments.
- Worked across product, design, AI, backend, and DevOps teams to shape features, define data and API requirements, and translate product concepts into practical technical solutions.

Mobile Developer
MyOrder Marketing Co., Ltd.

Chon Buri, Thailand | 05/2023 – 12/2023

- Built MyPinmall, a Flutter/Riverpod group-buying marketplace, and enhanced My Order, a React Native/TypeScript ordering application, delivering core commerce features while improving maintainability through modular models, reusable components, UI separation, and custom hooks.

Mobile Developer
Minerta Technology Co., Ltd.

Bangkok, Thailand | 09/2021 – 04/2023

- Developed mobile and web products across Flutter, React Native, and Nuxt—including a real-time drone tracking application—while serving as the primary frontend/mobile developer alongside a 5-person backend team and supporting junior developers with technical problem-solving.

PERSONAL PROJECTS

Intelligent AI Orchestration API

[In Development]

LLM Orchestration · Multi-Agent Workflows · Context Engineering · AI APIs

- Built an AI orchestration API that enriches requests and routes them through multi-agent workflows.

Offline AI Voice Interpreter

[Beta]

Flutter · Dart FFI · llama.cpp · SQLite · On-device LLM

- Developed a fully offline voice interpreter combining on-device speech recognition, LLM inference, and synthesis.
